## **ExpaTen 2 – The ideal flange connection for misaligned flange bores**

Based on many years of experience in the area of flange connections and the success of the ExpaTen Bolt, this technology has achieved an upgrade: ExpaTen 2 is the optimal flange connection for misaligned flange bores.

A specifically developed and constructed unit of measurement covers the difference in the borehole, is software-controlled supported. The adjustment of offsetting of the diameter and angles is able to compensate offsets of up to 2 mm of two flange bores, and thus provides the bolt with the optimal conditions for a snug and secure connection.

All of the known benefits of the ExpaTen Bolt, such as the snug torque-transmission by way of 100% form and friction connection, now carry over to the misaligned flange borings as well.
